SUMMARY

AI & ML graduate with hands-on experience in Python, SQL, Machine Learning, and AI-based project development. Built projects including a Deepfake Detection System using TensorFlow, OpenCV, and Flask for detecting manipulated image, video, and audio content. Strong understanding of Python programming, data processing, and problem-solving, with an interest in developing intelligent software solutions and data-driven applications.

TECHNICAL SKILLS

Programming Languages: Python, SQL, JavaScript

Machine Learning Libraries: NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn, TensorFlow, Keras, OpenCV, NLTK

Web Technologies: HTML5, CSS3, JavaScript, Flask

Databases: MySQL

Tools & Platforms: Git, GitHub, Jupyter Notebook, Google Colab, VS Code, Power BI, Microsoft Excel

PROJECTS

Deepfake Detection System (Major Project)

Technologies: Python, TensorFlow, Keras, OpenCV, Flask, React.js, NumPy, Pandas

- Developed a multi-modal Deepfake Detection System to identify manipulated image, video, and audio content through a web-based application.
- Trained and evaluated deep learning models using FaceForensics++ and Celeb-DF datasets, processing over 12,000+ videos and large-scale image and audio datasets exceeding 40 GB.
- Implemented XceptionNet for image classification, ResNet with BiLSTM for video sequence analysis, and MFCC-based audio feature extraction using CNN and LSTM architectures.
- Achieved over 90% accuracy across image, video, and audio detection models through data preprocessing, model optimization, and performance evaluation.
- Built a Flask backend and integrated trained .keras models with the frontend, enabling users to upload image, video, and audio files and receive real-time deepfake detection results.
- Enhanced the platform with a misinformation detection module and an AI-powered chatbot to improve user interaction and project accessibility.

Smart Resume Screening & Candidate Ranking System

Technologies: Python, Flask, React.js, MySQL, spaCy, Sentence Transformers, Scikit-learn, NLP

- Developed an AI-powered resume screening system that automates candidate evaluation and ranking based on job requirements and resume content.
- Built an NLP pipeline to extract skills, experience, projects, education, and certifications from PDF and DOCX resumes and store structured candidate data in MySQL.
- Implemented semantic matching using Sentence Transformers and cosine similarity to compare candidate profiles with job descriptions beyond keyword-based matching.
- Designed a weighted scoring engine that generated ATS-style scores, candidate rankings, and explainable recommendations based on skills, experience, projects, and qualifications.
- Developed a React-based dashboard to display ranked candidates, match scores, analytics, and detailed candidate insights, helping reduce manual screening effort.

Face Mask Compliance Monitoring System

Technologies: Python, TensorFlow, Keras, OpenCV, Flask, React.js, MySQL, NumPy, Pandas

- Developed a real-time computer vision system capable of detecting faces from live camera feeds and classifying mask compliance using deep learning techniques.
 - Trained and evaluated a CNN-based mask detection model using large-scale face mask datasets, enabling accurate classification of Mask and No Mask categories.
 - Implemented OpenCV-based face detection and real-time video processing to perform live mask monitoring and generate instant predictions.
 - Designed an automated violation management system that captures images of individuals without masks, records timestamps, and stores violation data in a MySQL database.
 - Built a Flask backend and monitoring dashboard to track compliance statistics, review violation records, and provide centralized access to captured violation data.
-

INTERNSHIPS

Data Science Intern | QSpiders, Hebbal (Feb 2026 – May 2026)

- Completed industry-oriented training in Python, Data Science, and Machine Learning concepts.
- Worked with Python, NumPy, Pandas, and data analysis techniques for data preprocessing and exploratory analysis tasks.
- Participated in technical presentations, mock interviews, and problem-solving sessions to strengthen analytical and communication skills.
- Applied Data Science concepts through project-based learning activities and practical assignments.

Artificial Intelligence Intern | LearnX (Powered by Wipro) | 2 Months

- Completed structured training in Artificial Intelligence and Machine Learning fundamentals.
 - Explored machine learning workflows, AI applications, and problem-solving approaches through practical learning modules.
 - Gained exposure to AI concepts including model development, data processing, and intelligent system design.
 - Strengthened understanding of real-world AI applications through hands-on exercises and guided learning activities.
-

EDUCATION

Bachelor of Engineering (B.E.) in Artificial Intelligence & Machine Learning

K N S Institute of Technology, Bengaluru

2022 – 2026 | CGPA: 7.78

Pre-University Course (PUC)

Vidhyanidhi PU Independent College

2019 – 2021 | Percentage: 62%

CERTIFICATIONS

Data Science Certification – QSpiders, Hebbal

Artificial Intelligence Internship Certification – LearnX (Powered by Wipro)

Microsoft Azure Fundamentals Certification

ADDITIONAL INFORMATION

- Available for full-time Software Developer, Python Developer, and AI/ML Engineer roles.
 - Open to relocation and on-site, hybrid, or remote opportunities.
 - Hands-on experience developing AI-powered applications using Python, Flask, SQL, and Machine Learning technologies.
-
